DETAILED ACTION

This office action is in response to the items discussed during the Personal Interview 15 December 2004.

Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with 16 December 2004 on Jonathan Morse.

The application has been amended as follows:

Claim 1, line 11, between the word "curve" and the punctuation ":", the following phrase has been added:

--formed by hauling off one side of said composite profile at a faster rate than another side--

Claim 6 has been replaced with the following claim:

--The process of claim 1, wherein said thermoforming takes place while maintaining the composite profile at an elevated temperature such that it remains thermoformable, and then cooling the shaped composite article to a temperature below the solidification temperature of the thermoplastic article.--

Allowable Subject Matter

Claims 1-3 and 5-11 are allowed, as amended above.

The following is an examiner's statement of reasons for allowance: The prior art of record neither teaches nor suggests the claimed pultrusion process for preparing a continuous fiber-reinforced thermoplastic composite article by continuously pulling the fibers through a process, including a step of thermoforming the composite profile on-line to form along the length of the article a curve formed by hauling off one side of the composite profile at a faster rate than another side, a twist, or a varied cross-sectional shape.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following patent is cited to further show the state of the art with regard to conveyors operating at different speeds. It is noted, however, that the following patent does not teach drawing a fiber bundle through a thermoplastic resin, drawing the composite melt through a consolidation die to form a thermoformable composite profile, thermoforming along the length of the article a curve by hauling off one side of the composite profile at a faster rate than another side, a twist, or a varied cross-sectional shape.
